

Compassion of BG sentinel vs BG sentinel 2 (2015)

<p>Updated Features in BG-2 (introduced in mid 2015)</p>		
<p>Pop-up design The pop-up design of the trap with a stainless steel wire frame will allow a quick set-up without individual, loose parts.</p>	<p>Trap was used to set stand by using spokes manually</p>	
<p>Cover Our new plastic cover provides additional stability to the trap and is easier for you to mount and clean. Air is emitted evenly through fine holes in the cover. The new plastic cover is easier to attach than its fabric precursor. It also contains an opening to easily insert the BG-Lure cartridge.</p>	<p style="text-align: center;">NO</p>	
<p>Funnel with shutter The new funnel is equipped with a shutter that closes the funnel automatically and prevents the caught mosquitoes from escaping in case the power supply fails for any reason. Also, the catch bag removal will be easier and faster since the funnel and catch bag together can function as a transport and storage unit. The shutter can be fixed for transport with a simple fixing mechanism.</p>	<p style="text-align: center;">NO</p>	

Ventilator

A form-fitting ventilator with a rounded profile and a waterproof connector will ensure endurance. The ventilator can be powered by a battery or via a power supply unit and provides the required suction to prevent the escape of captured mosquitoes.

NO

Connectors

The new connectors are waterproof and screwed shut to ensure a tight connection. The quick connect compartment allows trap power to be controlled from outside the trap when the battery is stored inside the trap body.

NO

CO2-nozzle

Optional CO₂ gas can be dispensed via the nozzle. The emitted CO₂ gas mimics the exhaled breath of a host and serves as an additional attractant. The CO₂ nozzle is mounted directly on top of the lure or in the lure recess if no lure is used.

NO

BG-lure Cartridge

The new version of the BG-lure is self contained and fits into an opening in the trap cover. This allows you to easily handle and exchange the -BG-Lure without coming into direct contact with the chemicals.

NO
